

The Book of Wisdom:

This archive contains the approximately 49,000 threads of the 18 MGTOW.com forums in no particular order.

As of 5th of August 2018.

... The way they are saved on the original website: All in one folder.

And there is no distinction between the 18 different forum sections to which each thread originally belongs.

But this is always stated in the header of the thread itself.

(Because the non-representative “Litter Box”- material is also part of this collection)

All threads are in “HTML text” only and contain no WordPress frames. So the appearance will not match the original website.

But embedded videos, pictures and other media still works.

Search by name, thread title or keyword in the windows search mask.

All links contained in these threads still lead to the original website.

This archive is intended for the forum writers to be able to recover their own written content if the site should ever cease to operate.

Remarks on the “Link Pages” download:

These are the over 4000 HTML pages that link to the 49000 threads in the 18 MGTOW.com forums.

As of 5th of August 2018.

Browsing these pages is now fast and direct compared to the website itself.

These pages here link to each other but the thread links still point to the original MGTOW.com forum.

Browsing old threads has now become simple and fast:

For example:

On the "MGTOW Central" forum itself, there are no direct links to the middle of the topic selection pages:

The user would have to click 1100 times "right" or "left" to get to the older (and buried) threads which are linked from e.g. page 1100 (of 2186).

Here in this archive, just open the /page/1100/ folder (or any other number between 1 and 2186) and open the index.html.

These files are only HTML and do not have the appearance of the original website.

Part 2 of this collection contains the (approximately) 49,000 threads themselves as simple HTML files.

HTML text only and no WordPress frames. But embedded videos, pictures and other media still works.

Virus scan:

The material in this archive was crawled, downloaded, checked, compiled and compressed running "Kaspersky Total Security 2018" on all machines in the network.

Notice:

Due to the repetitive nature of the material, the 7zip file compressor was able to reduce the file sizes of these 2 archives from **about 6.2 GB down to about 210 MB (!)**.

Expanding these files on your hard disk will require **about 6.2 GB of space**. Or you simply install "7zip" and view them inside the program's own browser.

The freeware "7zip" file compressor program for 32 and 64 Bit Windows is included in this download here.

Version: 18.05 from 2018-04-30 which was used for these files.

Installation of 7zip is free, quick and bug-free.

For more current versions (in the future) check: <http://www.7-zip.de/>
